Background

- Web development a very popular profession!
- Involves creating and maintaining websites or web applications
 - Lot goes behind the scenes, as we saw!
- Can introduce various attack vectors
 - Can be exploited by malicious players

Attacks

- A good characterization of attacks?
 - Server-side attacks
 - Client-side attacks
- Each targets different components of the web architecture
 - Client-side: User's browser and device
 - Server side: Server hosting the web application

Server-side Attacks

- Information Disclosure
 - SSRF
 - Directory Traversal
 - File Upload
 - Authentication
 - Access Control
 - SQL Injection
 - Command Injection
 - DDOS
- ... etc

Client Side Attacks

- CSRF
- XSS
- CORS
- ClickJacking
- Web Sockets
- ... etc

Outline

- Server-side Attacks and Defense
- Client-side Attacks and Defense
- Advanced/Complex Attacks
- Web Security Landscape
 - Anatomy of web attacks, OWASP top 10, CVE database and CVSS scores
 - Overall Defense and Best Practices

Enter the World of Web Security!
